

Peter Bikki

born 21.5.1986

Consultant, Linux System engineer, Web Developer

Summary

Versatile Consultant and Linux System Engineer with more than 15 years of experience in monitoring systems, Linux administration, and web development. Specialized in designing, optimizing, and implementing Zabbix solutions, including automation, scaling, and stability improvements. Strong analytical thinking, ability to translate technical requirements into clear solutions, and experience guiding customers through onboarding, migrations, and optimization projects.

Experience

Consultant / Monitoring - 04/2024 to Current

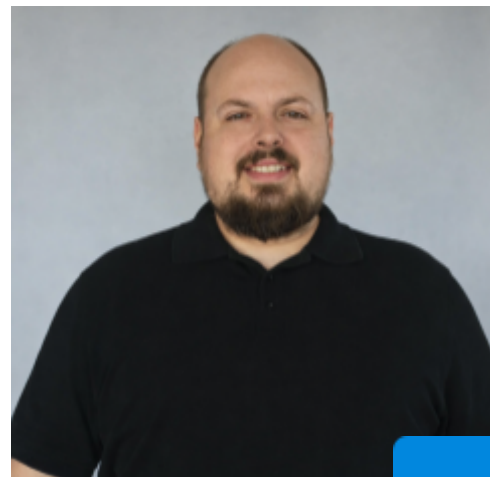

CANCOM Slovakia s.r.o., Košice, Slovakia

- Designed and implemented tailored monitoring solutions based on customer-specific requirements.
- Led customer onboarding, analyzing infrastructure needs and delivering customized Zabbix setups.
- Redesigned user and permission concepts, improving access control, performance, and system manageability.
- Optimized production monitoring environments for better scalability, usability, and long-term stability.
- Collaborated with cross-functional teams to align monitoring solutions with operational workflows.
- Supported customers with consulting, guidance, and best practices to enhance monitoring efficiency.

Linux System Engineer / Monitoring - 08/2020 to 04/2024

CANCOM Slovakia s.r.o., Košice, Slovakia

- Implemented and customized Zabbix monitoring, including templates, triggers, alerts, and automation of routine tasks
- Finetuned Zabbix setups, created custom checks, and collaborated with teams to expand monitoring coverage.
- Maintained Linux server infrastructure, including web servers (Apache, Nginx), database servers (MariaDB, MySQL, PostgreSQL), and proxy services.
- Performed system updates, security hardening, troubleshooting, and performance optimization across production environments.
- Worked on internal infrastructure projects using Microsoft Azure and Amazon Web Services (AWS), including provisioning, configuring, and maintaining cloud resources for testing and monitoring environments.
